FIVE NATURE-INSPIRED LANDSCAPE OPTIONS

Same resort site reference | Non-marine natural sources | Different spatial systems

Read each option by its geometry, not by its vegetation color.

17 | HONEYCOMB

Regular hexagonal cells

Large regular hexagonal rooms and connected joints form a coherent bee-cell lattice.

18 | LOTUS FLOWER

Lens-shaped petals

Large pointed petal rooms surround a central focus, with radial and peripheral connections.

19 | GINKGO LEAF

Bilobed fan and forked veins

A paired fan outline and dichotomous vein routes define broad landscape rooms.

20 | SUNFLOWER SEED HEAD

Spiral seed arrangement

Open spiral routes organize large seed-like planting compartments.

21 | BUTTERFLY WINGS

Bilateral wings and venation

An axial promenade and balanced wing rooms connect through branching vein paths.

Preliminary visual concepts; dimensions and exact site-line registration require CAD verification.

17 | HONEYCOMB | Regular hexagonal cells

Large regular hexagonal rooms and connected joints form a coherent bee-cell lattice.

18 | LOTUS FLOWER | Lens-shaped petals

Large pointed petal rooms surround a central focus, with radial and peripheral connections.
